

RouteFinder for ArcGIS

Application for network analysis in ESRI ArcGIS

RouteFinder for ArcGIS makes it very easy to do street network calculations from within ArcGIS and only requires ArcGIS 8.3 or newer.

Features:

- Work with large networks (0-500,000 links)
- Work with very large networks (0-16,000,000 links)*
- Any coordinate system (geographic / projected)
- Create networks directly from SHP files – very fast
- Shortest / fastest route
- Multi-mode routing
- One-way restrictions
- Distance matrices
- Travelling salesman optimization
- Multi-level drive time polygons
- Service area calculation
- Driving directions
- Z-levels
- Several topological checks of network structure*
- and much more

* Feature only available in Pro version.

Price:

900 Euro for Standard version, 1 user

1500 Euro for Pro version, 1 user

Multi-user discounts available. See web site for details.
