

RouteFinder for MapInfo

Application for network analysis in MapInfo Professional

RouteFinder for MapInfo makes it very easy to do street network calculations from within MapInfo and only requires MapInfo 4.1 or newer.

Features:

- Work with large networks (0-500,000 links)
- Work with very large networks (0-16,000,000 links)*
- Any coordinate system (geographic / projected)
- Create networks directly from TAB files – very fast
- Shortest / fastest route
- Multi-mode routing
- One-way restrictions
- Dynamic segmentation
- Distance matrices
- Travelling salesman optimization
- Nearest N facilities
- Multi-level drive time polygons
- Service area calculation
- Driving directions
- Z-levels
- Several topological checks of network structure*
- and much more

* Feature only available in Pro version.

Price:

900 Euro for Standard version, 1 user
 1500 Euro for Pro version, 1 user
 Multi-user discounts available. See web site for details.
